US-PAT-NO: 6158046

DOCUMENT-IDENTIFIER: US 6158046 A

TITLE: Computer device and method for
processing data utilizing
             pseudoinstruction words

---------- **KWIC** ---------

Detailed Description Text - DETX (44):
   In the case where the load signal is inactive, the RAM
performs the same
operation as that of the ROM shown in FIG. 5 described
above. If a writing
operation is performed again, it is possible to change the
contents of the
conversion table. Therefore, the converting circuit 2b
using the **RAM** is
convenient when used in the case where the object code
may be changed due to
replacement of the **ROM** 3 and the **overwrite** of the
contents stored in the **ROM** 3
constituted by an EEPROM.
